***Reason for Allowance***

The prior art reference of records (US Pat. 6,097,237) fails to teach or fairly suggest an arrangement for dynamically clamping overshoot in a received signal on a signal line while not clamping the received signal at times when the overshoot is not likely encountered, the arrangement comprising: an activation element, a deactivation element, wherein: the activation element is configured to assert the Clamp Enable signal in response to the transition of the received signal that occurs during a period in which a Driver Disable signal is asserted as called for in claims 3 and 22. Therefore, claims 3-10, 13-20 and 22-25 are presently allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
